

SUSTAINABLE AND RESILIENT BUILDING DESIGN IN CLIMATE AND SOCIAL SPECIFIC CONDITIONS

For four decades, Dr Steve Burroughs has demonstrated leadership and innovative approaches in the advancement of built environment sustainability and resilience. He has worked at the intersection of environmental-based design, low-energy construction materials, alternative construction methods, and Indigenous knowledge and values.

Dr Steve Burroughs has protected and enhanced the Corporate and Indigenous communities in which he has lived and worked by placing sustainability and resilience at the core of building design and construction.

Working with various government agencies and other NGO partners, Dr Burroughs continues to be involved at the forefront of sustainable/resilient building design, construction methods, and technologies.
